**MicroMatrix®**

**Unique Particulate Formation:**
- Can be used concomitantly with Cytal® Wound Matrix devices
- Offers better conformity to the wound bed
- Designed for irregular wound beds
- Easy to use and apply

**Derived from Porcine Urinary Bladder Matrix:**
- Decellularized, non-crosslinked extracellular matrix
- Completely resorbable
- Minimally processed
- Contains lamina propria and epithelial basement membrane

**Appropriate for a range of complex wounds including:**
- Traumatic Wounds
- Surgical Wounds
- Tunneling Wounds
- Chronic Wounds
- Pressure Ulcers

Clinical Studies

Male patient presented with a crush avulsion injury from a truck fan belt including partial amputation of three fingertips.

Initial presentation of the injury prior to management with MicroMatrix® particles.

Day 0

Day 8

1 Year

Day 8 after management with MicroMatrix.

One year follow up after serial applications of MicroMatrix.

At six weeks following initial application, wound size has decreased and wound depth is level with surrounding tissue. Split-thickness skin grafting is performed.

After serial debridement, MicroMatrix and Cytal Wound Matrix technology was reapplied to the resulting wound. Additional MicroMatrix is applied two weeks after initial application.

After grafting, patient suffered from lateral skin graft necrosis, and Cytal Wound Matrix technology was reapplied. Results at 12 weeks post-application.
