- PRE-TREAT**
Instruments must remain moist to avoid blood, mucus or other bio burden, which may cause damage if allowed to dry on the instrument.
 - Enzymatic solutions with neutral pH are preferred to pre-soak/hold instruments.
 - Never soak instruments overnight/weekend
 - Never use disinfectant as a "holding solution"
- RINSE**
Rinse instruments for 30 seconds under warm distilled or demineralized water. Tap water may leave spots on instruments.
- CLEANING**
An instrument may not be successfully sterilized if it is not completely clean. It is important that individuals cleaning instruments wear appropriate personal protective equipment (such as goggles or face shield, mask, gloves and apron).
Follow the steps below to ensure proper cleaning:
 - Separate dissimilar metals
 - Inspect for functionality
 - Apply stain remover (as needed)**ACCEPTED CLEANING METHODS:**
 Ultrasonic (most effective)
 Manual
 Automatic Washers
- RINSE AND DRY**
Rinse and dry instruments using surgical towels not treated with bleach or harmful chemicals.
- LUBRICATE**
Lubricant should be non-silicone based and water soluble. Never use industrial lubes.
 Lubrication:
 - Maintains longevity
 - Helps prevent spotting, staining, corrosion and sticking/tightness
 Lube all metal to metal contact:
 - Hinges, box locks, screws and blades
 - Lubricate weekly or more often if possible
 Types of Lubricant:
 Milk = 30 second dip - no rinse
 Spray = No rinsing
- PACKAGE - WRAP**
Before wrapping, check all instruments for functionality.
 - Separate dissimilar metals
 - Instruments must be in the open/unlocked position
 Hinges/box locks can fracture during heat expansion if closed.
 Wrap instruments in specialized bags, cassettes, surgical towels or containers with an indicator inside.
- STERILIZATION**
 - Autoclave - Recommended
 - Chemical/Cold Sterilization - Not Recommended
 - Dry Heat - Not Recommended
